

ANKIT GIRI

Gorakhpur, Uttar Pradesh, India | aggiri5634@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Bachelor of Computer Applications (BCA)
[ITM GIDA, Dr. A.P.J. Abdul Kalam Technical University \(AKTU\)](#)

Aug 2025 - Aug 2028
Gorakhpur, UP

- Relevant Coursework:** Data Structures & Algorithms (DSA), Object-Oriented Programming (C++), Relational Database Management Systems (SQL), Operating Systems, Software Engineering.

TECHNICAL SKILLS

- Languages:**
- Core Competencies:**
- Databases & Cloud:**
- Frameworks & Tools:**

C++, Python, C, C#, SQL, JavaScript, TypeScript, Java

Data Structures & Algorithms (DSA), Object-Oriented Design, REST APIs, Exploratory Data Analysis (EDA)

MongoDB, PostgreSQL, Microsoft Azure, Azure Cosmos DB

.NET Core, React, Node.js, Git, GitHub, Docker, Postman, Linux CLI

LEADERSHIP & EXPERIENCE

Google Student Ambassador
[Google Student Ambassadors \(India\)](#)

May 2026 - Sep 2026
Remote

- Selected as campus ambassador to represent Google developer initiatives and bridge academic learning with production engineering standards.
- Organized technical workshops for 150+ students on Gemini APIs, Google Cloud fundamentals, and competitive algorithmic problem-solving.
- Conducted structured peer-mentoring sessions on core DSA concepts in C++, accelerating participants' problem-solving velocity on coding platforms.

AI Trainer & Coach
[Technical Mentorship Programs](#)

Jul 2026 - Aug 2026
Uttar Pradesh, India (On-site)

- Delivered hands-on AI and Python curriculum modules to cohorts of 60+ engineering and computer applications students.
- Mentored participants through 15+ practical programming exercises covering data parsing, machine learning pipelines, and responsible AI guardrails.
- Supervised exploratory data analysis projects, improving processing runtime by enforcing vectorized NumPy/Pandas operations over nested loops.

TECHNICAL PROJECTS

Student Portfolio Record Engine [\[Code\]](#)

C++, DSA, File Systems, CLI

- Engineered a memory-efficient console application in C++ utilizing custom bisection search algorithms to index and retrieve 10,000+ records in under 2 ms.
- Implemented binary file serialization routines to ensure constant-time O(1) header retrieval and prevent memory leaks during large file updates.
- Optimized memory layout by replacing raw dynamic pointers with bounded standard vectors, cutting peak application heap usage by 35%.

Financial Goal & Microservice Server [\[Code\]](#)

C#, .NET, MongoDB, React, Postman

- Extended a multi-tier financial ledger microservice backend in C#/.NET, integrating MongoDB schema models for custom tracking and emoji metadata persistence.
- Constructed idempotent PUT request validation endpoints in .NET to sanitize incoming payload structures, verifying 100% endpoint test coverage in Postman.
- Built decoupled React UI components for dynamic icon and state selection, decreasing client-side re-render latency across state updates.

Green AI Eco-Informatics Telemetry Pipeline [\[Code\]](#)

Python, Scikit-Learn, Pandas

- Built a regression-based predictive model during the IM1B fellowship to ingest simulated IoT environmental sensor feeds and identify abnormal variance thresholds.
- Executed end-to-end exploratory data analysis and automated feature scaling on 50,000+ metric records, maintaining 92% variance prediction accuracy.
- Designed an automated alert dispatch algorithm that flags anomalous environmental indicators with zero manual intervention.

CERTIFICATIONS & SIMULATIONS

- Microsoft Certified: Azure Data & Analytics Fundamentals — Microsoft (Jun 2026)
- Green Skills & Applied AI for Climate Action (70+ Hrs) — IM1B (Aug 2026)
- Data Analytics Virtual Experience: Forensic EDA — Deloitte / Forage (May 2026)

- Microsoft AI Skills Fest 2026: Digital Badge — Microsoft (2026)
- Software Engineering Virtual Experience — Commonwealth Bank / Forage (Jul 2026)
- Cybersecurity Virtual Experience — Commonwealth Bank / Forage (Aug 2026)
